DevOps Engineer Intern (REF. NO: 262459)

Who we are:
Logicea is a provider of software development services and data solutions, helping its clients leverage big data, cloud and mobile technologies, experience design, along with DevOps practices to achieve strategic, operational and IT objectives. Based in Washington D.C. with the development center in Athens, Greece, Logicea operates around the world, with presence in Dubai and Singapore.

We're currently seeking young students who are passionate about innovating, impacting their experience, interested in learning and being part of our team. If you're looking for an exciting and challenging role in a dynamic environment, then we would like to meet you. Take this opportunity to get familiar with Logicea space and people.

We love technology and the people who are passionate about it!

During your internship you will:
- Be a member of an agile team and work with business domain experts to acquire your very first job experience
- Be involved in the development process and architecture of various projects using automation tools, cloud technologies and Linux OS
- Develop hands-on experience in complex infrastructure and application automation
- Explore and evaluate new technologies and tools like Jenkins, Ansible, Containers, AWS, GCP, Terraform, Python, Debian
- Discover the meaning of Software Version Control, Continuous Delivery and Project Methodology
- Cooperate with the DevOps team delivering challenging projects

You don't need to have much but the following are a good start:
- Studies in Computer Engineering/Information Technology or any other relevant field
- Excellent written and verbal communication skills in English
- Strong interest in systems engineering (Linux, Networks, Monitoring, Security, Automations)
- Analytical and methodical approach with attention to detail
- High learning agility and continuous improvement mindset
- Team player spirit and good interpersonal skills
